PROFESSIONAL SUMMARY

Senior Data Scientist / AI Architect leading end-to-end delivery of production AI and ML solutions. Lead projects from requirements gathering and solution architecture through implementation, deployment, and technical delivery, including SDDs and architecture decisions. Hands-on experience across agentic AI, multi-agent systems, RAG, ML, cloud, MLOps, and AI platforms, with experience providing technical direction across teams.

CORE SKILLS

GenAI & Agentic Systems: RAG, Prompt Engineering, LLM Evaluation, Multi-Agent Orchestration (AWS AgentCore, Azure AI Foundry, Google A2A), MCP & A2A Protocols, LangGraph, Strands

Machine Learning & DL: Predictive Modelling, ANN, CNN, RNN, LSTM, Computer Vision (YOLOv8), NLP (NER, Spacy), TensorFlow, PyTorch

Engineering & Cloud: Python, FastAPI, Flask, SQL/NoSQL/GraphDB, ETL Pipelines, Docker, Kubernetes, AWS, Azure, Google Cloud, Microservices

MLOps & Governance: CI/CD (Azure DevOps, Jenkins, CodePipeline), Model Deployment & Monitoring, Observability (OpenTelemetry, SigNoz, SignalFx), Responsible AI, AI Governance, Explainability

Tools: Git, Bitbucket, Visio, Draw.io, GraphViz, PlantUML

PROFESSIONAL EXPERIENCE

EY Global Delivery Services

May 2025 – Present

Senior Consultant — Senior Data Scientist / AI Architect

- Lead end-to-end technical delivery of AI use cases, owning requirements gathering, solution architecture, SDDs, architecture decisions, implementation guidance, and delivery while providing technical direction to the project team.
- Architected a multi-agent system (fan-in/fan-out: supervisor agent + 8 sub-agents, supporting resources as microservices) serving as the compliance and capability gate across 1,000+ enterprise tools.
- Designed and shipped a custom Agent Development Kit (distributed via JFrog Artifactory), adopted by 23+ teams within a month.
- Directed design of an MCP-based intelligence platform enabling natural-language search across Confluence, KPIs, and internal docs — eliminating manual search time by surfacing exactly what teams needed on request.
- Architected a self-healing GenAI platform (SigNoz observability) that auto-detects bugs and generates code fixes for developer review — cutting developer remediation time by ~65%.
- Led delivery of a low-code AI audit platform (Dify, GPT-4o) for a global financial services client, automating regulatory compliance validation.

PwC Acceleration Centre

Sep 2024 – May 2025

Associate 2 — Data Scientist

- Architected a GenAI document-extraction solution (Azure OpenAI GPT-4o) for Workday data — drove a 75% efficiency gain over manual processing.
- Designed integration architecture using Azure Functions and Azure Service Bus for large-scale automated processing.
- Established CI/CD architecture (Azure DevOps) with integrated security gating (Blackduck, Veracode).
- Deployed a containerised file-conversion service to Azure Container Registry (ACR) via Azure Functions.

Tata Consultancy Services

Oct 2021 – Aug 2024

Systems Engineer — Data Scientist

- Built a classification model on IoT sensor data from an oil & gas client's machinery, running daily batch predictions to flag equipment needing service and trigger automated alerts, reducing unplanned downtime.

- Built a GenAI analytics tool using Azure OpenAI GPT-4 to retrieve KPIs across markets and dimensions, cutting retrieval time by 50%.
- Designed a RAG-based customer service chatbot (Google Gemini 1.5 Pro) for automated inquiry resolution.
- Developed and deployed predictive models to improve customer insight and engagement for a retail client.
- Architected a custom data-extraction pipeline (Google Cloud) for an oil & gas client — 80% faster document retrieval.
- Built a custom Named Entity Recognition (NER) model with Spacy to extract entities from user prompts for LLM input and persistent user preferences.
- Trained and deployed a custom YOLOv8 computer vision model for pipeline leak detection in desert oilfield environments.

Extentia Information Technology

Mar 2021 – Sep 2021

Trainee — Data Analyst

- Performed data profiling to identify anomalies, missing values, and inconsistencies across datasets.
- Implemented data cleansing techniques to improve data accuracy and reliability.
- Built and ran inbound/outbound ETL jobs on a custom Data Processing Engine (DPE) using scheduled SSIS jobs.
- Built stored procedures and functions to automate recurring data processes.

EDUCATION

B.Tech, Computer Science Engineering — Pailan College of Management and Technology, Kolkata | GPA: 9.06/10 | July 2021

CERTIFICATIONS

[Azure Data Scientist Associate](#) • [Azure AI Apps and Agents Developer Associate](#) • [GitHub Copilot Developer](#) • [Oracle Cloud Infrastructure 2022 Certified Foundations Associate](#)

AWARDS & RECOGNITION

- Recognised by client CTO for delivering a high-quality production GenAI solution.
- Commended by the client Director and Delivery Manager for an end-to-end Gen AI implementation, concept to production.
- 4x Spotlight Award and 1x Employee of the Month for outstanding contributions.

PERSONAL PROJECTS

- Generative AI order-placement assistant for e-commerce using Google PaLM and LangChain.
- Document scanner for text extraction from scanned documents using Tesseract OCR.
- Image classification using a custom Convolutional Neural Network (CNN).
